## Universal Charging & Seamless Power Distribution

The next evolution in professional power management is here—the Core SWX NANOX M-Snap Series. Designed to eliminate the limitations of traditional charging and power distribution, the NANOU98MX, NANOC98MX, and NANOFMX introduce M-Snap, a magnetic snap-charge technology that allows multiple packs—regardless of mount type or voltage—to be magnetically stacked and charged through a single PD Pro connection.

## Charge Multiple Battery Types with One System

The NANOX M-Snap Series eliminates the need for dedicated chargers by allowing Sony BPU, Canon BPA, and Sony L-Series (NP-F) batteries to stack and charge together via a single PD Pro USB-C input. Now, filmmakers can mix 7.4V and 14.8V packs in one system, streamlining production workflows.

## More Than Charging—A Complete Power Hub

Each pack functions as a power distribution hub:

- **NANOU98MX (Sony BPU) & NANOC98MX (Canon BPA)** – Powers cameras while supplying accessories via P-Tap.
- **NANOFMX (Sony L-Series)** – Delivers extended runtime for L-Series devices.
- **PD Pro Input/Output** – Charges while powering accessories.

### USBC-PD Charge

Charge multiple packs via a single USBC-PD charge cable.

## Seamless, Modular Power for Any Production

M-Snap redefines efficiency with a compact, universal system—no more bulky chargers or compatibility issues. Charge everything. Power anything.
